ConnectSphere

Release 1 Product Backlog

IS212 Software Project Management | Team 8

Final Jira export and traceability submission

Prepared 6 November 2026 (SGT)

Release 1 scope summary

Scope marker: Jira Fix Version **Release 1**. This was inferred from the live Jira project because no separate Release 1 marker was confirmed. The customer-source register and later clarifications control requirement scope; the final Jira export controls the ticket fields shown below.

Release 1 stories	Jira status	Requirement coverage
65	Done: 55, In Progress: 2, In Review: 3, To Do: 5	65 of 65 canonical stories mapped; no orphan Release 1 Jira story

Audit outcome

The final Jira set contains only Stories, and every Release 1 Story has a Jira priority, epic parent and assignee. E06-S07 is the later-customer-clarification follow-up; it was created rather than reopening the completed E06-S05. Three source-backed, merged-but-not-accepted items were moved to In Review, not Done.

Planning confirmations still required

[CONFIRM] Point estimates: E03-S08, E03-S09, E03-S10, E03-S11, E03-S12, E06-S07, E14-S03. [CONFIRM] Sprint assignment: E01-S13, E02-S05, E03-S08, E03-S09, E03-S10, E06-S07. These values are displayed as [CONFIRM] in the backlog instead of being invented or backdated.

Method checklist and provenance

The repository contains the full requirements register (all customer-source files in date order), the lecture-backed backlog rubric checklist, and the traceability matrix. Stories use the taught role-goal-benefit form and scenario-based Given/When/Then acceptance criteria; story points and sprint commitments are treated as team decisions, not customer facts.

E01 - Access & Identity

8 Release 1 story/stories

E01-S01 - Log in to the system (SCRUM-16)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1	Assignee	Xiangying
Status	Done	Requirements	C-30, T-38, O-02

User story

As an Event Organiser, I want to log in with my registered credentials so that I can access my organisation's event information securely.

Acceptance criteria

Scenario 1 - Valid credentials accepted

Given I am a registered user with valid credentials When I submit my email address and password Then I am signed in and taken to the dashboard for my role

Scenario 2 - Wrong password reveals nothing

Given I am a registered user When I submit an incorrect password Then I remain signed out and see a message that does not reveal whether the email address is registered

Scenario 3 - Lockout on fifth failure

Given I have submitted 5 consecutive incorrect passwords When I attempt to sign in again Then my account is locked and I am shown how to reset my password

Scenario 4 - Reset link issued

Given my account is locked When I request a password reset Then a reset link is sent to my registered email address

Scenario 5 - Lock lifted on new password

Given I have followed a valid reset link When I set a new password Then the lock is lifted and I can sign in with the new password

E01-S02 - Restrict event visibility to my own client (SCRUM-17)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 1	Assignee	Xiangying
Status	Done	Requirements	C-40, B-01

User story

As an Event Organiser, I want to see only events belonging to my own client organisation so that other clients' information stays confidential.

Acceptance criteria

Scenario 1 - Own client's events only

Given I am signed in as an Event Organiser for Client A When I open my event list Then only events belonging to Client A are shown

Scenario 2 - Direct access refused

Given an event belongs to a client organisation I am not linked to When I navigate directly to that event's identifier Then access is refused and the attempt is recorded in the activity log

Scenario 3 - Colleague's event visible

Given my organisation has several Event Organisers When a colleague from my organisation creates an event Then I can see that event in my organisation's list

E01-S03 - Hide internal planning information from Attendees (SCRUM-18)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1	Assignee	Xiangying
Status	Done	Requirements	B-01

User story

As an Attendee, I want to see only the published details of events I have registered for so that I am not shown ConnectSphere's internal planning information.

Acceptance criteria

Scenario 1 - Published details only

Given I am signed in as an Attendee and registered for an event When I view that event Then I see the published name, date, time and venue, and no Coordinator notes, booking decisions, equipment reservations or internal comments

Scenario 2 - Internal screen refused

Given I am signed in as an Attendee When I attempt to open an internal planning screen Then access is refused and the attempt is recorded in the activity log

E01-S04 - Update my account details (SCRUM-19)

Priority	Medium	Points	1.0
Sprint	SCRUM Sprint 1, SCRUM Sprint 2	Assignee	Jining
Status	Done	Requirements	T-08, T-61

User story

As a system user, I want to update my name, email and contact number so that ConnectSphere reaches me at the correct address.

Acceptance criteria

Scenario 1 - Valid changes saved

Given I am signed in When I save valid changes to my profile Then the updated details are stored and shown when I next open my profile

Scenario 2 - Malformed email rejected

Given I enter an email address in an invalid format When I try to save Then the change is rejected and the invalid field is identified

Scenario 3 - Duplicate email rejected

Given I enter an email address already registered to another account When I try to save Then the change is rejected

Scenario 4 - Notifications follow the new address

Given I change my email address When the change is saved Then future notifications for my events are sent to the new address

E01-S08 - Create an account (SCRUM-23)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1	Assignee	Jining
Status	Done	Requirements	C-34, C-35, C-57

User story

As an Attendee, I want to create an account so that I can register for events and manage my registrations.

Acceptance criteria

Scenario 1 - Account created

Given I do not have an account When I submit the required details Then an Attendee account is created and I can sign in with it

Scenario 2 - Email already in use

Given an account already exists with that email address When I submit the form Then I am told the address is already in use and no second account is created

Scenario 3 - Invalid submission corrected

Given required fields are missing or the password does not meet the stated policy When I submit Then the account is not created and I am shown what to correct

Scenario 4 - Attendee role only

Given I sign up through the public form When my account is created Then it holds the Attendee role only

E01-S11 - Deactivate my account (SCRUM-25)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1	Assignee	Jining
Status	Done	Requirements	C-26, T-09, T-52, T-53, T-54, T-55

User story

As a system user, I want to deactivate my account so that I can stop using the system while ConnectSphere retains the records it needs.

Acceptance criteria

Scenario 1 - Deactivated and signed out

Given I am signed in When I confirm deactivation Then I am signed out and can no longer sign in with those credentials

Scenario 2 - Historical records retained

Given I have deactivated my account When ConnectSphere views an event I was linked to Then my past registrations and event records remain intact and attributed

Scenario 3 - Upcoming registration released

Given I am an Attendee registered for an upcoming event (an event whose start timestamp is in the future) When I deactivate Then my registration is withdrawn and the place is released, and this applies to both `registered` and `waitlisted` entries, and deactivation overrides the E09-S05 `withdrawal_deadline` (see T-53, T-54, T-55)

Scenario 4 - Coordinator with events blocked

Given I am an Event Coordinator with events assigned to me in an active-lifecycle status (Submitted, Under review, Clarification requested, Approved, Planning, or Confirmed) When I attempt to deactivate Then deactivation is blocked until those events are reassigned, while events in Completed, Cancelled, or Rejected status do not block deactivation (see T-52)

E01-S12 - Manage only the events assigned to me as an Event Coordinator (SCRUM-156)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 5	Assignee	Bryan
Status	Done	Requirements	C-69, C-40, T-70, T-73, T-74, O-38

User story

As an Event Coordinator, I want my event list and event actions to cover only the events assigned to me so that I manage my own work and cannot act on a colleague's event by mistake.

New story from the Week 7 Customer Changes (C-69). E01-S02 (Organiser isolation) is Done and stays Done; this story extends the same discipline to a second role rather than editing it (T-74). Venue availability (C-40, E05-S03) is unaffected: Coordinators still see every venue's calendar states, with other events' details withheld as E05-S03 Scenario 2 already requires. Estimate at Sprint 3 planning (T-73). Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md`.

Acceptance criteria

Scenario 1 - Own assigned events only

Given events are assigned to me and to other Coordinators When I open my event list Then only the events assigned to me are shown

Scenario 2 - Direct access to a colleague's event refused

Given an event is assigned to another Coordinator When I navigate directly to its identifier or attempt any action on it Then access is refused, nothing about the event is revealed, and the attempt is recorded in the activity log

Scenario 3 - Unassigned requests not visible to Coordinators

Given requests are in the unassigned queue When I open my event list Then they are not shown, because the queue belongs to the Lead (assumes O-38)

Scenario 4 - Venue calendars still visible

Given other Coordinators' events hold venue bookings When I open a venue availability calendar Then the Free, Tentative, Confirmed and Blocked states are shown for every period while the other events' details are withheld, exactly as in E05-S03 Scenario 2

Scenario 5 - Organiser isolation unchanged

Given an Event Organiser for Client A is signed in When they open their event list Then E01-S02 Scenarios 1 to 3 hold unchanged

E01-S13 - Sign in as an Event Coordinator Lead or Safety Officer (SCRUM-157)

Priority	Medium	Points	5.0
Sprint	[CONFIRM]	Assignee	Bryan
Status	Done	Requirements	C-69, C-70, C-57, T-72, T-73, T-74, O-44

User story

As an Event Coordinator Lead or a Safety Officer, I want to sign in and land on the workspace for my role so that I can start on the queue of work that belongs to me.

New story from the Week 7 Customer Changes (C-69, C-70) adding the sixth and seventh roles (T-72). E01-S01 (log in) is Done and stays Done; the two new roles' landing pages are this story rather than an edit to it (T-74). Accounts are pre-seeded like every other internal role (C-57). Estimate at Sprint 3 planning (T-73). Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md`.

Acceptance criteria

Scenario 1 - Lead lands on the unassigned queue

Given I am a pre-seeded Event Coordinator Lead When I sign in with valid credentials Then I am taken to the unassigned queue (E03-S08) with the oversight view (E03-S10) one step away, and the navigation shows only the Lead's pages

Scenario 2 - Safety Officer lands on the safety review queue

Given I am a pre-seeded Safety Officer When I sign in with valid credentials Then I am taken to the list of events awaiting Operational Safety Check (E08-S06), and the navigation shows only the Safety Officer's pages

Scenario 3 - One role per account

Given a Lead or Safety Officer account exists When its role is inspected Then it holds exactly that one role and no Coordinator permissions, consistent with ADR-012 (assumes O-44)

Scenario 4 - Existing roles' sign-in unchanged

Given an Organiser, Coordinator, Venue Staff member, Technical Support Staff member and Attendee each sign in When they land Then each reaches the same dashboard as before this story, so E01-S01 Scenario 1 holds for all five existing roles

E02 - Event Request & Submission

5 Release 1 story/stories

E02-S01 - Submit an event request (SCRUM-26)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 1, SCRUM Sprint 2	Assignee	Aaron
Status	Done	Requirements	C-36, T-11, T-12

User story

As an Event Organiser, I want to submit an event request so that ConnectSphere can begin planning my event.

Acceptance criteria

Scenario 1 - Complete request submitted

Given I am signed in as an Event Organiser and every mandatory field is complete When I submit the request Then its status becomes Submitted and I receive confirmation

Scenario 2 - Missing mandatory fields blocked

Given one or more mandatory fields are empty When I try to submit Then submission is blocked and every missing field is identified

Scenario 3 - Past date blocked

Given I enter a preferred date in the past When I try to submit Then submission is blocked with an explanation

Scenario 4 - None required satisfies a field

Given my event needs no equipment When I select 'none required' for that field Then the field counts as complete and submission proceeds

E02-S02 - Save a draft event request (SCRUM-27)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1, SCRUM Sprint 2	Assignee	Aaron
Status	Done	Requirements	-

User story

As an Event Organiser, I want to save an incomplete event request as a draft so that I can gather the missing information and complete it later.

Acceptance criteria

Scenario 1 - Draft saved and hidden from Coordinators

Given I have partially completed a request When I save it as a draft Then it is stored with status Draft and is not visible to Event Coordinators

Scenario 2 - Draft reopened with values restored

Given I have a saved draft When I reopen it Then all previously entered values are restored

Scenario 3 - Draft deleted

Given I have a draft I no longer need When I delete it Then it is removed from my list and is not counted as an active request

Scenario 4 - Completed draft submitted

Given a draft has every mandatory field complete When I submit it Then it follows E02-S01 and its status becomes Submitted

E02-S03 - Match accessibility requirements to venue features (SCRUM-28)

Priority	Medium	Points	1.0
Sprint	SCRUM Sprint 1	Assignee	Aaron
Status	Done	Requirements	T-13, T-45, B-06

User story

As an Event Organiser, I want to record the accessibility requirements for my event so that ConnectSphere only offers venues that can meet them.

Acceptance criteria

Scenario 1 - Predefined requirements stored

Given I am creating an event request When I select one or more accessibility requirements from the predefined list Then they are stored with the request and shown to the assigned Event Coordinator

Scenario 2 - Free-text captured but not matched

Given my requirement is not in the predefined list When I enter it in the free-text box Then it is stored and shown to the Coordinator, and is excluded from automated venue matching

Scenario 3 - Search filters on predefined requirements

Given predefined accessibility requirements are recorded for an event When a venue search is run for the event Then venues that do not meet them are excluded or clearly marked unsuitable

E02-S05 - Reuse a previous event's details (SCRUM-259)

Priority	Medium	Points	3.0
Sprint	[CONFIRM]	Assignee	Aaron
Status	To Do	Requirements	C-74, T-79, T-87, T-90, T-99

User story

As an Event Organiser, I want to create a new request by copying a previous event so that I do not re-enter the same information for a recurring event.

Acceptance criteria

Scenario 1 - Previous event copied

Given I choose one of my own completed or past events When I copy it Then ConnectSphere creates a new draft with the event requirements and Session structure copied, all event and Session dates/times left blank, and no bookings, reservations, or registrations carried over (T-99)

Scenario 2 - Missing reference flagged

Given the copied event references a venue or equipment item that no longer exists When the draft is created Then the affected requirement is flagged for review and identifies its Session rather than being copied silently

Scenario 3 - Dates remain subject to current submission policy

Given I later submit the copied draft When I enter event and Session dates Then the current E02-S01 and E02-S07 validation applies; copying does not bypass the two-year horizon or the Coordinator feasibility review

E02-S07 - Validate the event date horizon (SCRUM-180)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 5	Assignee	Xiangying
Status	Done	Requirements	C-71, C-72, T-87

User story

As an Event Organiser, I want to submit a request without a fixed minimum lead time while dates more than two years ahead are rejected so that a Coordinator can assess feasibility within a bounded planning horizon.

No estimate was previously recorded. A three-point estimate was proposed on 31 October 2026 for teammate/PO review, sized against E09-S03 registration-period control (3), E02-S01 request submission (5) and E04-S02 multi-Session authoring (5). The bounded scope reuses the existing submission and form paths: Singapore-local calendar-year validation for Event and Session dates, an inclusive two-year boundary, preserved past-date checks, field-specific feedback, and timezone/leap-day/draft-resubmission regression tests. Building the E04-S02 Session write path is a dependency, not work counted again here; no new booking, registration, notification or database-schema feature is included. Jira remains unestimated until the

matching backlog PR merges and the estimation basis is confirmed. T-73 estimates in-flight stories for their remaining work only. Because Event-level implementation already exists on an unmerged branch, team/PO confirmation is required on whether three points is the whole-story reference size or must be adjusted to remaining scope, and how it is counted for sprint reporting. This proposal does not claim three points of work remain, change sprint commitments, or backdate an estimate.

Acceptance criteria

Scenario 1 - No fixed minimum lead time

Given a requested event date is not in the past and is within the permitted horizon When I submit the request Then ConnectSphere does not reject it solely because it is fewer than a fixed number of days or months away; the assigned Coordinator assesses feasibility

Scenario 2 - Dates beyond two years rejected

Given any requested event or Session date is later than two calendar years after the Singapore-local submission date When I submit the request Then submission is blocked and the out-of-range date is identified

Scenario 3 - Two-year boundary accepted

Given every requested event and Session date is on or before the date two calendar years after the Singapore-local submission date When I submit an otherwise valid request Then the date-horizon check passes

Scenario 4 - Past Event date rule preserved

Given the requested Event date is in the past When I submit the request Then E02-S01 past-date validation still blocks it

Scenario 5 - Past Session date rejected

Given any requested Session date is in the past When I submit the request Then submission is blocked and the past Session date is identified

E03 - Review, Coordination & Status

11 Release 1 story/stories

E03-S01 - Assign an Event Coordinator to a request (SCRUM-32)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 2	Assignee	Aaron
Status	Done	Requirements	C-12, C-41, C-55, C-56, T-14, T-15, C-69, T-70, T-74

User story

As an Event Organiser, I want my submitted request to be assigned an Event Coordinator automatically so that my event has one clear internal owner from the outset.

Done in Sprint 2 (#141, #147) and kept Done (T-74). The Week 7 Customer Changes (C-69) end automatic assignment: Scenarios 1 and 2 and the first two checklist items are superseded by E03-S08, which puts new requests in an unassigned queue worked by the Event Coordinator Lead. They stay here as the record of what was delivered. Scenarios 3 to 6 remain in force; E03-S09 adds the Lead as a second actor who may reassign directly.

Acceptance criteria

Scenario 1 - [Superseded by E03-S08 (C-69)] Exactly one Coordinator assigned

Given a request is submitted When submission completes Then the system assigns exactly one Event Coordinator, the status becomes Under Review, and that Coordinator is notified

Scenario 2 - [Superseded by E03-S08 (C-69)] Fewest active events wins

Given several Event Coordinators are available When the system assigns one Then it selects the Coordinator with the fewest active events

Scenario 3 - Reassignment requested

Given I am the assigned Coordinator and a reassignment has been agreed offline When I request reassignment to a named colleague Then the request is recorded, that colleague is notified, and I remain assigned until they accept

Scenario 4 - Reassignment accepted

Given a reassignment request is awaiting my acceptance When I accept it Then I become the assigned Coordinator, the previous assignment ends, and the change is recorded in the activity log

Scenario 5 - Reassignment declined

Given a reassignment request is awaiting acceptance When the named colleague declines it Then the original Coordinator remains assigned and is notified of the refusal

Scenario 6 - Unassigned Coordinator refused

Given I am not the assigned Coordinator When I attempt to reassign the event Then the action is refused

E03-S02 - Request clarification from the Event Organiser (SCRUM-33)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 2	Assignee	Aaron
Status	Done	Requirements	C-10, B-02

User story

As an Event Coordinator, I want to return a request to the Event Organiser with specific questions so that unclear requirements are corrected before planning begins.

Acceptance criteria

Scenario 1 - Questions sent, status changes

Given I am reviewing a request with status Under Review When I record my questions and send them Then the status becomes Awaiting Clarification and the Event Organiser is notified with the questions

Scenario 2 - Organiser responds, review resumes

Given a request is Awaiting Clarification When the Event Organiser responds and resubmits Then the status returns to Under Review and I am notified

Scenario 3 - Outstanding questions visible

Given a request is Awaiting Clarification When I view it Then the outstanding questions and the date they were raised are shown

E03-S03 - Decide on an event request (SCRUM-34)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 2	Assignee	Aaron
Status	Done	Requirements	C-09, T-39, T-41, T-43, O-06

User story

As an Event Coordinator, I want to approve or reject a request and record my reasoning so that the Event Organiser receives a clear, traceable decision.

Acceptance criteria

Scenario 1 - Approved to planning

Given a request has status Under Review and the required information is complete When I approve it Then the status becomes Approved and the Event Organiser is notified

Scenario 2 - Incomplete request blocked

Given required information is still incomplete When I try to approve the request Then approval is blocked and the missing items are listed

Scenario 3 - Rejected with reason

Given a request is under review When I reject it and record a reason Then the status becomes Rejected, the reason is stored and the Event Organiser is notified

Scenario 4 - Rejection without reason blocked

Given I attempt to reject without recording a reason When I confirm Then the rejection is blocked

Scenario 5 - Rejected record is read-only

Given a request has been rejected When the Event Organiser views it Then the reason and the date of the decision are shown and the request is read-only

E03-S05 - Track the status of my event (SCRUM-35)

Priority	Medium	Points	1.0
Sprint	SCRUM Sprint 2	Assignee	Xiangying
Status	Done	Requirements	B-03

User story

As an Event Organiser, I want to see the current status of my event so that I know what stage planning has reached without contacting my Coordinator.

Acceptance criteria

Scenario 1 - Current status in plain language

Given my event is at any stage When I open it Then the current status and the date it was reached are shown in plain language

Scenario 2 - New status and history entry

Given my event's status changes When I next open the event Then the new status is shown and the change appears in the event history

E03-S06 - Discuss an event through comments (SCRUM-36)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 2	Assignee	Xiangying
Status	Done	Requirements	C-15, C-47, B-02

User story

As an Event Organiser, I want to post comments and questions on my event record so that planning conversations with my Coordinator are kept with the event rather than scattered across email.

Acceptance criteria

Scenario 1 - Comment posted and Coordinator notified

Given I have access to an event When I post a comment Then it appears on the event with my name and the time it was posted, and the assigned Coordinator is notified

Scenario 2 - Comments in chronological order

Given a comment exists on my event When I view the event Then all comments are shown in chronological order

Scenario 3 - Comment on inaccessible event refused

Given I do not have access to an event When I attempt to post a comment Then the action is refused

E03-S07 - View and update event information (SCRUM-37)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 2	Assignee	Xiangying
Status	Done	Requirements	C-52, T-16

User story

As an Event Coordinator, I want to view and update event information while planning is underway so that the record stays accurate as details are settled.

Acceptance criteria

Scenario 1 - Organiser edits before approval

Given an event has not yet been approved When the Event Organiser edits any field Then the change is saved directly against the event

Scenario 2 - Coordinator edits after approval

Given an event has been approved When I edit any field as the assigned Coordinator Then the change is saved and recorded in the activity log

Scenario 3 - Organiser edits unrestricted fields

Given an event has been approved When the Event Organiser edits the event name, description, purpose or registration dates Then the change is saved directly

Scenario 4 - Restricted edit routed to change request

Given an event has been approved When the Event Organiser attempts to change the date, time, expected attendance, venue requirements, accessibility needs, equipment requirements or layout Then direct editing is refused and they are directed to raise a change request (E10-S01)

Scenario 5 - Unassigned Coordinator refused

Given I am not the assigned Coordinator When I attempt to edit an approved event Then the action is refused

E03-S08 - Assign a queued request to an Event Coordinator as the Lead (SCRUM-256)

Priority	Medium	Points	[CONFIRM]
Sprint	[CONFIRM]	Assignee	Aaron
Status	To Do	Requirements	C-69, C-85, C-93, C-100, C-105, C-106, C-127, C-130, T-70, T-72, T-73, T-74

User story

As an Event Coordinator Lead, I want newly submitted event requests to enter an unassigned queue that I work through, assigning each to a suitable Event Coordinator, so that incoming work is distributed deliberately rather than automatically.

New story from the Week 7 Customer Changes (C-69). It replaces the automatic assignment delivered by E03-S01 Scenarios 1 and 2, which stay recorded there as superseded (T-74). Estimate at Sprint 3 planning (T-73). Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md`.

Acceptance criteria

Scenario 1 - Submission enters the unassigned queue

Given an Event Organiser submits a request When submission completes Then no Event Coordinator is assigned, the event's status stays Submitted, the request appears in the unassigned queue, and every active Event Coordinator Lead is notified (replaces E03-S01 Scenarios 1 and 2)

Scenario 2 - Queue shows basic event information, oldest first

Given requests are in the unassigned queue When I open it as an Event Coordinator Lead Then each shows the event name, the Organiser's client organisation, preferred dates, expected attendance and the time submitted, oldest first; every Lead sees the same organisation-wide queue, and no non-Lead can view it

Scenario 3 - Lead assigns a Coordinator

Given a request is in the queue When I, as an Event Coordinator Lead, choose an Event Coordinator and assign them Then exactly one Coordinator is assigned immediately, the status becomes Under Review, the Coordinator and the Organiser are notified, the request leaves the queue, and the activity log records the Lead actor and time

Scenario 4 - Workload shown while choosing

Given I am choosing a Coordinator When the list of Coordinators is shown Then each shows their count of active events, so the fewest-active-events rule the system used to apply (T-14) is available as advice without being enforced

Scenario 5 - Only a Lead may assign from the queue

Given I am not an Event Coordinator Lead When I attempt to view or assign a queued request Then the action is refused and the refusal is recorded in the activity log

Scenario 6 - Status transition and Organiser view unchanged

Given a request has been assigned from the queue When the Organiser tracks the event (E03-S05) Then the status history shows Submitted followed by Under Review exactly as it did under automatic assignment, so E03-S01's delivered transition still holds

E03-S09 - Reassign an event as the Lead (SCRUM-257)

Priority	Medium	Points	[CONFIRM]
Sprint	[CONFIRM]	Assignee	Aaron
Status	To Do	Requirements	C-69, C-85, C-90, C-93, C-100, C-104, C-105, C-106, C-127, C-128, C-129, T-70, T-73, T-74

User story

As an Event Coordinator Lead, I want to reassign an event to a different Event Coordinator where necessary so that workload, absences and conflicts can be managed without waiting on the current Coordinator.

New story from the Week 7 Customer Changes (C-69). Later customer clarifications supersede the former Coordinator-to-Coordinator request-and-acceptance workflow: the Event Coordinator Lead alone assigns and reassigns, immediately, and the system has no Coordinator-initiated reassignment-request workflow (C-104, C-128, C-129). The historical E03-S01 scenarios remain as delivery history only (T-74). Estimate at Sprint 3 planning (T-73).

Acceptance criteria

Scenario 1 - Lead reassignment takes effect immediately

Given an event is assigned to a Coordinator When I, as an Event Coordinator Lead, reassign it to another Coordinator Then the change takes effect at once without an acceptance step, the outgoing and incoming Coordinators and the Organiser are notified, and the activity log records the Lead actor and time

Scenario 2 - Lead may reassign at any stage with an assignment

Given an event has an assigned Coordinator at any workflow stage When I, as an Event Coordinator Lead, select another eligible Coordinator Then the reassignment is immediate, all relevant users are notified, and the activity log preserves both the prior and new assignment

Scenario 3 - Coordinator-initiated reassignment workflow is unavailable

Given I am an assigned or unassigned Event Coordinator When I attempt to create, accept, decline or request a reassignment through the system Then the action is refused because only an Event Coordinator Lead may assign or reassign

Scenario 4 - Only a Lead may reassign

Given I am not an Event Coordinator Lead When I attempt to reassign an event Then the action is refused and recorded in the activity log

E03-S10 - Oversee coordinator assignments and active events as the Lead (SCRUM-258)

Priority	Medium	Points	[CONFIRM]
Sprint	[CONFIRM]	Assignee	Aaron
Status	To Do	Requirements	C-69, C-86, C-93, C-100, C-106, C-127, T-70, T-73

User story

As an Event Coordinator Lead, I want to view every coordinator assignment and every active event under my supervision so that I can see workload across the team and step in where needed.

New story from the Week 7 Customer Changes (C-69). Estimate at Sprint 3 planning (T-73). Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md`.

Acceptance criteria

Scenario 1 - Every active event and its Coordinator listed

Given events exist in every status When I open the oversight view Then every event whose status is Submitted, Under Review, Awaiting Clarification, Approved, Planning, Safety Review or Confirmed is listed with its assigned Coordinator or "Unassigned", and I can filter by Coordinator and by status

Scenario 2 - Workload per Coordinator

Given Coordinators have events assigned When I open the workload summary Then each Coordinator is shown with their count of active events and the list of those events

Scenario 3 - One Lead sees everything

Given multiple Event Coordinator Leads exist When any Lead opens the oversight view Then every unassigned request and active Coordinator assignment is included regardless of which Lead or Coordinator is viewing it; Lead access is organisation-wide rather than partitioned

Scenario 4 - Coordinators cannot open the oversight view

Given I am not an Event Coordinator Lead When I navigate to the oversight view Then access is refused and the attempt is recorded in the activity log

E03-S11 - Let the Organiser edit registration setup and fix the date layout (SCRUM-176)

Priority	Medium	Points	[CONFIRM]
Sprint	SCRUM Sprint 3	Assignee	Lexin
Status	Done	Requirements	C-52, T-16, T-74

User story

As an Event Organiser, I want to fill in and correct the registration setup on my event request, and read the registration dates clearly, so that a request that left the registration setup blank can still be completed for approval.

Acceptance criteria

Scenario 1 - Organiser edits registration setup before approval

Given my event has not yet been approved When I edit its registration setup Then the change is saved against the event and recorded in the activity log

Scenario 2 - Registration setup cannot be cleared

Given my event has a registration setup When I try to save it empty Then the save is blocked and the recorded registration setup is unchanged

Scenario 3 - Registration setup restricted for the Organiser after approval

Given my event has been approved When I open its edit form Then the registration setup is read-only and I am directed to raise a change request (E10-S01)

Scenario 4 - Coordinator edits registration setup after approval

Given an event has been approved When I edit its registration setup as the assigned Coordinator Then the change is saved and recorded in the activity log

Scenario 5 - Registration dates laid out clearly

Given I am editing an event When I view the Registration section Then "Registration opens" and "Registration closes" are shown as two separate labelled fields, each label with its own input, with no sideways scrolling at phone width

E03-S12 - Show consistent Organiser save success status (SCRUM-196)

Priority	Medium	Points	[CONFIRM]
Sprint	SCRUM Sprint 3	Assignee	Lexin
Status	Done	Requirements	T-93

User story

As an Event Organiser, I want confirmation of a saved event edit to use the shared success Alert so that I can recognise the same clear save outcome used on the Coordinator's event page.

Acceptance criteria

Scenario 1 - Shared success Alert after a saved edit

Given I may edit an event When a changed field saves successfully Then the event detail shows the existing field-specific saved message through the shared Alert with tone="success", retaining role="status" rather than replacing it with an urgent alert or plain paragraph.

Scenario 2 - Saved data and audit survive reload

Given an allowed event edit succeeds When the record reloads and I reopen it Then the changed value is retained and its existing activity-log entry remains available, with no extra save or audit write caused by rendering the confirmation.

Scenario 3 - Failure cannot report success

Given a new edit is invalid or its save request fails When I attempt to save Then the existing validation or error feedback remains and no success Alert claims that attempt was saved; starting a new edit clears the previous save confirmation.

Scenario 4 - Cancellation and permissions unchanged

Given I cancel an edit or attempt a field I cannot edit under the current event status and access rules When the attempt ends Then cancellation produces no save confirmation or mutation, and existing restrictions and change-request routing remain in force.

E04 - Programme & Sessions

1 Release 1 story/stories

E04-S02 - Create a multi-session event (SCRUM-39)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 5	Assignee	Amareet
Status	In Review	Requirements	C-19, C-62, C-107, T-48, T-79, T-85

User story

As an Event Organiser, I want to define an event made up of one or more Sessions so that each Session's requirements can be planned separately.

Acceptance criteria

Scenario 1 - Sessions hold their own requirements

Given I am creating an event When I add one or more Sessions Then each Session stores its date, time, expected attendance, venue requirements, and equipment requirements beneath the Event

Scenario 2 - Single-session event needs no extra setup

Given my event has one Session When I create it Then the system supports it as a single-session Event without requiring extra registration or lifecycle setup

Scenario 3 - Suitability judged per Session

Given two Sessions have different attendance or requirements When venue suitability is assessed for each Then each assessment uses that Session's own requirements and attendance

Scenario 4 - Session booking is independent

Given one Event uses the same venue for different Sessions When bookings are requested Then each booking is linked to its Session and its own time window; a booking for one Session does not replace another Session's booking

Scenario 5 - Deleted Session releases its booking

Given a Session has a confirmed venue booking When I delete that Session Then the booking is released, Venue Staff are notified, and the deletion is recorded in the activity log

E05 - Venue Catalogue & Availability

6 Release 1 story/stories

E05-S01 - Maintain the venue catalogue (SCRUM-40)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1	Assignee	Lexin
Status	Done	Requirements	T-13, T-18, B-05

User story

As a Venue Staff member, I want to add and update venue records so that Event Coordinators search against accurate information.

Acceptance criteria

Scenario 1 - Venue added and searchable

Given I am adding a venue When I save it with location, capacity, facilities, accessibility features, supported layouts and operating hours Then it becomes searchable by Event Coordinators

Scenario 2 - Capacity drop flags bookings

Given a venue has confirmed bookings When I reduce its capacity below the expected attendance of one of those bookings Then the affected bookings are flagged for review and the assigned Coordinators are notified

Scenario 3 - Venue retired

Given a venue has no future bookings When I retire it Then it no longer appears in search results and its past bookings are retained

Scenario 4 - Retirement blocked by future bookings

Given a venue has future bookings When I attempt to retire it Then retirement is blocked and the blocking bookings are identified

E05-S02 - Match layout requirements to venue capacity (SCRUM-41)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1	Assignee	Lexin
Status	Done	Requirements	T-45, B-07

User story

As a Venue Staff member, I want to record the room layouts supported by a venue and the maximum capacity for each layout, so that Event Coordinators only consider arrangements the venue can accommodate.

Acceptance criteria

Scenario 1 - Layout and capacity stored

Given I am editing a venue When I add a supported layout with its maximum capacity Then it is stored against that venue

Scenario 2 - Undersized layout excluded

Given an event requires a theatre layout for a given attendance When a Coordinator searches for venues Then venues whose theatre capacity is below that attendance are excluded or marked unsuitable

Scenario 3 - Duplicate layout warned

Given a layout already exists on the venue When I try to add it again Then I am warned and no duplicate is created

E05-S03 - View the venue availability calendar (SCRUM-42)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 2	Assignee	Lexin
Status	Done	Requirements	C-40, C-60, T-17, T-49

User story

As an Event Coordinator, I want to view a venue's calendar so that I can see when the venue is free, pending, confirmed or blocked.

Acceptance criteria

Scenario 1 - Four states distinguishable

Given a venue has bookings and blocks in a period When I open its calendar for that period Then each entry is shown as Free, Tentative, Confirmed or Blocked, and the states are visually distinguishable

Scenario 2 - Other events' details withheld

Given I do not have permission to view another event's details When I open the calendar Then the period is shown as unavailable without revealing the other event's information

Scenario 3 - Block distinct from booking

Given a venue is blocked for maintenance When I view the calendar Then the block is clearly distinct from a booking

E05-S04 - Block a venue for maintenance (SCRUM-43)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 2	Assignee	Lexin
Status	Done	Requirements	-

User story

As a Venue Staff member, I want to block a venue for maintenance, renovation or safety reasons so that it is not offered for events during that period.

Acceptance criteria

Scenario 1 - Free period blocked

Given a venue has no bookings in a period When I block that period and record a reason Then the venue no longer appears as available for those dates

Scenario 2 - Block over a confirmed booking warned

Given a venue already has a confirmed booking in the period When I try to block it Then I am warned of the conflict and must resolve it before the block takes effect

Scenario 3 - Affected Coordinators notified

Given a block is created over an upcoming event's dates When the block is saved Then the affected Coordinators are notified

E05-S05 - Apply setup and turnaround time (SCRUM-44)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 4, SCRUM Sprint 3	Assignee	Aaron
Status	Done	Requirements	C-65, T-66, T-73, T-74, O-20, O-21, O-22 (supersedes C-18, C-38)

User story

As a Venue Staff member, I want to record the setup and turnaround time each venue requires so that every availability and conflict check accounts for the time needed to prepare the room before an event and reset it afterwards.

Returned to Release 1 by the Week 7 Customer Changes (C-65). The five-point estimate is the one carried from the original backlog and is re-estimated at Sprint 3 planning (T-73). Scenario 3 lives here rather than in E05-S03, and Scenario 7 here rather than in E06-S01, because both of those stories are Done (T-74). Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md` and are amended if the customer answers differently.

Acceptance criteria

Scenario 1 - Buffers recorded on the venue

Given I am creating or editing a venue When I enter a setup time and a turnaround time in whole minutes, either of which may be 0, and save Then both values are stored against the venue and shown on its detail, and every venue that existed before this story has both values at 0

Scenario 2 - Occupancy window computed from the buffers

Given a venue has a setup time of 30 minutes and a turnaround time of 45 minutes When a booking or tentative hold for 10:00 to 12:00 is evaluated for availability or conflicts Then the venue is treated as occupied from 09:30 to 12:45

Scenario 3 - Calendar shows the buffered window

Given a venue with non-zero buffers has a Confirmed booking or a Tentative hold When a Coordinator or Venue Staff member views the venue availability calendar Then the Confirmed or Tentative period shown covers the buffered window and the buffer portion is visually distinguishable from the advertised event time, and the Free, Tentative, Confirmed and Blocked states of E05-S03 are otherwise unchanged

Scenario 4 - Conflicts created by a buffer change are identified, not removed

Given a venue has Confirmed bookings 10:00 to 12:00 and 12:30 to 14:00 and a turnaround time of 0 When I change the turnaround time to 45 minutes and save Then the save succeeds (assumes O-21), both bookings remain Confirmed and the later one is marked Conflicting rather than released, the conflicting pair is listed to me on save, the calendar flags the conflict, and the Coordinator of each affected event is notified (assumes O-20)

Scenario 5 - Buffers do not apply against a maintenance block

Given a venue has a maintenance block ending at 12:00 and a setup time of 30 minutes When a booking request for 12:00 to 14:00 is evaluated Then the block and the booking are compared on the booking's advertised times, so the request is not in conflict with the block (assumes O-22)

Scenario 6 - Adjacent buffered windows do not conflict

Given booking A occupies a venue until 12:45 once its turnaround is applied When booking B's buffered window on the same venue starts at exactly 12:45 Then there is no conflict, and when it starts at 12:44 there is

Scenario 7 - Buffered occupancy excludes a venue from search

Given a venue's existing booking or hold, once that venue's setup and turnaround time are applied, overlaps an event's requested period When a Coordinator runs the venue search for that event Then the venue does not appear as available even though the advertised event times do not overlap; E06-S01 is Done and is not edited, this is its buffered-search requirement placed here under T-74

E05-S06 - Mark a venue temporarily unavailable over existing bookings (SCRUM-152)

Priority	Medium	Points	8.0
Sprint	SCRUM Sprint 4	Assignee	Lexin
Status	Done	Requirements	C-66, C-48, C-61, C-111, C-120, C-121, C-122, T-28, T-67, T-74, T-80, T-81, T-91, O-23, O-24, O-25, O-26

User story

As a Venue Staff member, I want to mark a venue temporarily unavailable for maintenance, equipment failure, renovation, a safety concern or another operational reason, even when events are already booked in it, so that affected bookings are identified and their Coordinators can arrange an alternative without the events themselves being cancelled.

New story from the Week 7 Customer Changes (C-66). It supersedes E05-S04 Scenario 2, which refused a block over a confirmed booking; E05-S04 is in the Sprint 2 sprint backlog and is not edited (T-67, T-74). No estimate was recorded at Sprint 3 planning (T-73). An eight-point estimate was proposed on 28 October 2026 for teammate review, sized against E05-S04 (3), E10-S05 (5) and E10-S01 (8): seven scenarios across a schema change, backend and frontend, covering Conflicting bookings and holds, the Confirmed-to-Planning return, in-app and email notifications, open-ended and extended periods, shortening and lifting, and edit history. Jira stays blank until the matching backlog PR merges, then is set to eight points. T-73 estimates in-flight stories for their remaining work only, so team/PO confirmation is required on whether eight points records the whole-story size and how it is counted for sprint reporting. It is not an estimate of work remaining now.

Updated on 23 October 2026, before any work on the story started, to the Week 9 decisions that closed its open questions; an incomplete story's criteria are updated in place (T-74). T-80 allows an unavailability with no end, in force until Venue Staff lift it, and keeps setup and turnaround buffers off unavailability periods (closes O-23). T-81 returns a Confirmed event whose active venue booking is lost to Planning without cancelling it (C-120, closes O-24 and replaces its earlier "status unchanged" default). C-121 confirms the O-25 notification rule and C-122 the O-26 restore rule. T-91 lets Venue Staff edit an unavailability, keeps the history of each change and notifies affected Coordinators when it is lifted. C-111 asks that affected existing bookings be flagged; Scenario 2 applies this to unexpired Tentative holds as well as Pending and Confirmed bookings.

Acceptance criteria

Scenario 1 - Unavailability recorded with a reason

Given I am viewing a venue When I mark it unavailable from a start date and time, with an optional end date and time, and choose a reason category from maintenance, equipment failure, renovation, safety concern or other, with a free-text note Then the unavailability is saved with the period, the category, the note and my identity, and the calendar shows the period as Blocked; with no end, it shows as Blocked from its start until it is lifted (T-80)

Scenario 2 - Overlapping bookings become Conflicting, not released

Given the venue has a Pending request and a Confirmed booking inside the period When I save the unavailability Then the save succeeds, both bookings are marked Conflicting, neither is released or cancelled, and the two affected events are listed to me on save; overlap is judged on each booking's advertised times, not its setup and turnaround buffers (T-80); an unexpired Tentative hold inside the period is flagged Conflicting in the same way, is not released, and its event is listed and its Coordinator notified as in Scenario 4 (C-111)

Scenario 3 - A Confirmed event returns to Planning, not cancelled

Given a Confirmed event's active venue booking has just become Conflicting When the unavailability is saved Then the event returns to Planning automatically and is not cancelled, every other arrangement is intact, and a venue-conflict flag with the reason category is shown on the event; an affected event that was not Confirmed keeps its status (C-120, T-81)

Scenario 4 - Affected Coordinators informed

Given the unavailability made one or more bookings Conflicting When it is saved Then the Coordinator of each affected event immediately receives an in-app and email notification naming the venue, the period, the reason category and the event, and stating that alternative arrangements are required; the Organiser and registered Attendees are not notified at this point (C-121, T-81)

Scenario 5 - Open-ended or extended unavailability

Given I am recording an unavailability When I leave the end date and time empty Then it is saved as open-ended and stays in force until it is lifted; and Given a saved unavailability When I extend its end or remove its end Then bookings newly inside the longer period are handled as in Scenarios 2 to 4 (T-80, T-91)

Scenario 6 - Unavailability shortened, lifted or ended early

Given a booking is Conflicting only because of an unavailability When I shorten or lift that unavailability so the booking no longer overlaps it Then the Conflicting flag clears and the booking returns to the status it had before, Pending, Confirmed or Tentative, except that a hold whose expiry has passed in the meantime becomes Expired (E06-S05); a booking the Coordinator has already cancelled or replaced is not restored; an event already returned to Planning follows E08-S04 Scenario 4 rather than returning straight to Confirmed (C-122, T-81)

Scenario 7 - Edits and lifts keep their history

Given an unavailability exists When I edit its period or reason, or lift it Then a history entry keeps the earlier and new period and reason with my identity and the time, a lifted unavailability is kept rather than deleted, and when it is lifted the Coordinator of each event whose booking it made Conflicting is notified (T-91)

E06 - Venue Search & Booking

7 Release 1 story/stories

E06-S01 - Search for suitable venues (SCRUM-45)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 2	Assignee	Jining
Status	Done	Requirements	B-08

User story

As an Event Coordinator, I want to search venues by date, time, attendance, capacity, layout, accessibility and facilities so that I can shortlist options for an event quickly.

Acceptance criteria

Scenario 1 - Matching venues listed

Given venues exist that match all my criteria and are available When I run the search Then those venues are listed with their capacity, layouts and facilities

Scenario 2 - Near matches show failing criteria

Given no venue matches all criteria When I run the search Then near matches are returned rather than an empty result

Scenario 3 - Undersized venue marked unsuitable

Given a venue is available but its capacity is below the event's expected attendance When results are displayed Then it is excluded or clearly marked as unsuitable

Scenario 4 - Blocked or booked venues excluded

Given a venue is blocked or already confirmed the event's period When I run the search Then it does not appear as available

E06-S02 - Check venue suitability against event requirements (SCRUM-46)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4, SCRUM Sprint 3	Assignee	Jining
Status	Done	Requirements	C-06, T-13, T-48 (supersedes T-21), T-77, B-08

User story

As an Event Coordinator, I want the system to compare a venue against the event's recorded requirements so that I do not request a venue that cannot meet them.

Acceptance criteria

Scenario 1 - Suitability shown for the event

Given an event has recorded requirements When I view a venue in the context of the event Then a suitability status is shown for the event

Scenario 2 - Failing requirements named

Given a venue fails one or more recorded requirements When I view it Then it is marked unsuitable and every failing requirement is named

Scenario 3 - All requirements met

Given a venue meets all recorded requirements for the event When I view it Then it is marked suitable

Scenario 4 - Unsuitable venue may still be requested

Given a venue is marked unsuitable When I submit a booking request for it anyway Then the request is accepted and the unsuitability is shown to the Venue Staff for their decision

Scenario 5 - Operating hours checked without blocking booking (T-77)

Given an event has recorded start and end times When I check a venue's suitability Then an event outside the venue's operating hours is marked Unsuitable with "outside operating hours" explicitly named; an event fully within the hours passes this criterion. Suitability remains advisory and an unsuitable venue may still be requested, with its failures shown to Venue Staff for their decision.

Product Owner clarification relayed on 8 October 2026. E06-S01 operating hours remain display-only; its search behaviour is unchanged. Use the existing Singapore timezone and daily opening-window convention. Exact opening and closing times are within hours. This is event-based; T-21's sessions wording is withdrawn by T-48.

E06-S03 - Request a venue booking (SCRUM-47)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4, SCRUM Sprint 3	Assignee	Jining
Status	Done	Requirements	C-01, C-16, C-17, C-37, C-46, C-60, T-20, T-49, C-65, T-66, C-67, T-68, T-78, O-27, O-29, O-30, T-94, T-95, T-96

User story

As an Event Coordinator, I want to submit a venue booking request for an event so that Venue Staff can review it and decide whether the venue can be provided.

Acceptance criteria

Scenario 1 - Request created as Pending

Given an event has recorded requirements and no pending request When I submit a booking request for a venue Then the request is created with status Pending, the venue calendar shows the period as Tentative, and the Venue Staff are notified

Scenario 2 - First request moves event to Planning

Given the event has status Approved When its first booking request is submitted Then the event status becomes Planning

Scenario 3 - Several venue bookings for one event

Given the event already has a Pending or Confirmed venue booking When I submit a request for another venue, or for the same venue over a different period, for the same event Then the request is created as Pending alongside the existing bookings, each booking keeps its own status, the event lists all of them, and withdrawing or changing one booking leaves the others untouched (C-67, T-68; replaces the earlier rule that blocked a second request, T-20 retired)

Scenario 3a - Each booking carries its own purpose and headcount

Given I am requesting one of several venues for an event When I submit the request Then I may record a purpose (for example "Main programme" or "Breakout A") and an expected headcount for that booking; suitability and capacity checks for that venue use the booking's headcount when present and the event's expected attendance otherwise (confirmed O-27, T-78)

Scenario 3b - Bookings may cover different windows inside the event

Given an event runs 09:00 to 18:00 When I request a breakout room for 14:00 to 16:00 Then the request is accepted; a request whose period falls outside the event's start and end is refused. Setup and turnaround buffers may extend beyond the event period and still reserve the venue (confirmed O-29, T-78)

Scenario 3c - One booking is the primary venue

Given an event has more than one Confirmed venue booking When I view the event Then the first booking to be Confirmed is marked primary by default and I may mark a different Confirmed booking as primary; Pending bookings cannot be primary; the primary venue is the one shown to Attendees (confirmed O-30, T-78)

Scenario 3d - Assigned Coordinator and planning status required (T-78)

Given I am the assigned Event Coordinator and the event is Approved or Planning When I submit a valid booking request Then submission is permitted. Other actors or event statuses are refused. A Confirmed event needing a replacement must first return to Planning through the authorised reversion workflow.

Scenario 3e - Withdraw a Pending request only (T-94, T-95)

Given I am the assigned Event Coordinator and one venue request is Pending When I withdraw it Then only that booking becomes Released, its occupancy is freed, the event stays in its current status, other bookings are unchanged, the action is recorded, and the requested venue's currently assigned active Venue Staff are notified in-app and through the email outbox. A converted hold is not restored. Confirmed bookings cannot be withdrawn here; they use a separate cancellation flow and are outside TC_E06S03_08.

Given a withdrawal and a staff approval or rejection race for the same Pending booking When the venue row and then the booking row are locked and its status is rechecked Then only the first valid transition succeeds; the losing action returns 409 and its user refreshes without overwriting the winning transition.

Scenario 3f - Retry withdrawn replacements and follow rejection chains (T-96)

Given a Rejected booking suggests another venue When I follow the suggestion Then a new Pending request references that rejection and all submission checks rerun; the original remains Rejected. At most one non-Released replacement may reference a rejection, and an identical submission retry returns its existing row.

Given that replacement is withdrawn to Released When I try the same suggestion again Then a new request may reference the same rejection, all checks rerun and the Released history remains. If the replacement was Rejected instead, I cannot reuse the older rejection's suggestion. I may follow a new suggestion on that latest rejection, linking to it; there is no fixed two-attempt limit. A rejection without a suggestion ends that suggestion chain.

Scenario 4 - Venue taken by another event blocked

Given a venue is already Pending or Confirmed for another event over the same period When I submit a request for it Then submission is blocked and the conflict is explained

Scenario 5 - Request conflicts through the buffer

Given a venue is Confirmed for another event 10:00 to 12:00 and has a turnaround time of 45 minutes When I submit a request for 12:30 to 14:00 Then submission is blocked and the conflict names the other event's buffered window, 09:30 to 12:45 (C-65, T-66)

Confirmed-primary cancellation is a future separate flow: clear primary and prompt the Organiser to select another Confirmed venue, with no automatic promotion (T-94). This does not implement that flow or change the existing Coordinator selection permission in Scenario 3c.

E06-S04 - Decide on a venue booking request (SCRUM-48)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4, SCRUM Sprint 3	Assignee	Lexin
Status	Done	Requirements	C-08, T-39, C-65, T-66, T-75, T-76

User story

As a Venue Staff member, I want to approve or reject booking requests and record my reasoning so that Coordinators receive a clear, traceable decision.

Acceptance criteria

Scenario 1 - Request approved and confirmed

Given a booking request is pending and the venue is free for the period When I approve it Then the booking becomes Confirmed, the venue calendar is updated and the Coordinator is notified

Scenario 2 - Rejected with reason and alternative

Given I reject a request When I record a reason and optionally suggest an alternative venue Then the Coordinator is notified with both, and can amend the request to the suggested alternative without restarting the search

Scenario 3 - Rejection without reason blocked

Given I attempt to reject without recording a reason When I confirm Then the rejection is blocked

Scenario 4 - Approval checks the buffered window

Given approving a pending request would make its buffered occupancy window overlap another Confirmed booking's buffered window on the same venue When I approve it Then approval is blocked and the conflicting booking is identified, even if the two advertised event times do not overlap (C-65, T-66)

Scenario 5 - Booking decision recorded

Given a venue booking is approved, rejected or released When the action completes Then an entry is recorded with the actor, the action, the affected records and the time

E06-S05 - Hold a venue tentatively (SCRUM-49)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 3	Assignee	Amareet
Status	Done	Requirements	C-01, C-16, C-37, C-60, T-49, C-65, T-66, C-68, T-69, T-78, T-92, O-31, O-32, O-33, O-34, T-102

User story

As an Event Coordinator, I want to place a tentative hold on a venue so that it is not taken by another event while the arrangements are still being finalised, and I want the hold to expire at a known time so that venues are not reserved indefinitely.

The expiry scenarios come from the Week 7 Customer Changes (C-68, T-69) and reverse the earlier position that no expiry was required (C-01, C-16, C-60, T-49). Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md`.

Acceptance criteria

Scenario 1 - Tentative hold placed

Given a venue is free for the period When I place a tentative hold Then the calendar shows the period as Tentative, the hold is recorded against my event, and the hold carries an expiry date and time set to 48 hours from creation by default, which Venue Staff may change on the hold (assumes O-31)

Scenario 2 - Slot already held or booked

Given a venue already has a tentative hold or a confirmed booking for the period When I attempt to hold it for another event Then the hold is refused and the occupied buffered window is shown as unavailable, without naming the other event (T-102)

Scenario 3 - Hold becomes a booking request

Given I hold a venue tentatively When I submit a booking request for that venue Then the hold becomes a pending booking request for the same period and the expiry no longer applies, because submitting the request is the action that completes the hold; an expired hold cannot be converted (confirmed O-32, T-78)

Scenario 4 - Hold released

Given I hold a venue tentatively and no longer need it When I release the hold Then the period returns to Free on the calendar

Scenario 5 - Hold occupies the buffered window

Given a venue has a setup time of 30 minutes and a turnaround time of 45 minutes When I hold it tentatively for 10:00 to 12:00 Then the hold occupies 09:30 to 12:45, the calendar shows that window as Tentative, and another hold or booking request overlapping any part of it is refused (C-65, T-66)

Scenario 6 - Hold expires and frees the venue

Given my hold's expiry date and time has passed and I have not submitted a booking request for it When the expiry job next runs Then the hold's status becomes Expired, the period returns to Free on the calendar, the venue can be held or requested by any event, and an Expired hold is never counted as a Confirmed or Pending booking anywhere, including the E08-S03 confirmation gate (C-68, T-69)

Scenario 7 - Coordinator told at expiry

Given my hold expires When the expiry job runs Then I receive one in-app notice and one email naming the venue, the event and the expiry time, saying the hold has expired and the venue is free; a later run sends nothing more. There is no reminder before expiry (T-92, replacing the O-33 default)

Scenario 8 - Venue Staff may extend a hold

Given a hold has not yet expired When Venue Staff set a later expiry date and time Then the new expiry applies, and the extension is recorded in the activity log with who made it; an expired hold cannot be extended and must be placed again (T-92)

Scenario 9 - Expiry exactly at the boundary

Given a hold expires at 10:00:00 When the expiry job runs at 09:59:59 Then the hold is still Tentative, and when it runs at 10:00:00 or later Then the hold is Expired

E06-S06 - Prevent double-booking of a venue (SCRUM-50)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 4, SCRUM Sprint 3	Assignee	Lexin
Status	Done	Requirements	C-01, C-16, C-46, T-22, C-60, C-65, T-66, C-67, T-68, C-109, T-100, T-102

User story

As a Venue Staff member, I want to be blocked from approving a booking that overlaps an existing confirmed booking for the same venue so that a venue is never committed to two events at once.

Acceptance criteria

Scenario 1 - First accepted claim reserves the buffered slot

Given a venue has no active overlapping Pending, Confirmed or unexpired Tentative booking When a hold or booking request is successfully accepted Then its current buffered window is claimed for that venue

Scenario 2 - Later overlapping claim refused

Given an active claim reserves a venue's buffered window When another hold or booking request overlaps it Then the new claim is refused, the ordinary Coordinator response identifies the occupied buffered window as unavailable without disclosing another event's title or private booking details, and the active claim remains unchanged

Scenario 3 - Concurrent claims fail safely

Given two new holds or booking requests concurrently claim overlapping buffered windows on one venue When both are processed Then exactly one claim is accepted and the other receives 409 without an extra row or side effects

Scenario 4 - Approval rechecks current buffered availability

Given a request was accepted while its buffered window was available and the venue buffers later change When Venue Staff attempt approval Then current availability, concurrency and buffer values are rechecked; C-109 conflicts stay flagged and retained, and approval is blocked until Venue Staff reject one conflicting Pending request with a reason or an authorized Coordinator withdraws/replans one request. The remaining now-free Pending request may then be approved; a Rejected request is terminal and is never approved. No claim is silently released or selected as a winner. Exactly adjacent half-open buffered windows remain available.

Scenario 5 - Conflicts are per venue, not per event

Given one event has claims on two different venues over the same period When both requests are approved Then both become Confirmed, because conflict detection is per venue and an event may legitimately occupy several venues at once (C-67, T-68)

E06-S07 - Configure tentative-hold expiry and warning (SCRUM-260)

Priority	High	Points	[CONFIRM]
Sprint	[CONFIRM]	Assignee	Amareet
Status	To Do	Requirements	C-68, C-79, C-96, C-99, C-110, C-114, C-124, C-125, C-126, T-74

User story

As a Venue Staff member, I want to set and update each tentative hold's expiry and its Coordinator warning so that a venue is reserved only for a staff-configured period and the Coordinator can act before or when it expires.

This is a follow-up for the later Week 9 customer clarifications. It does not

reopen completed E06-S05: its fixed 48-hour default and no-pre-expiry-warning behaviour are superseded for future work (T-74). The customer did not estimate this follow-up or assign it to a Sprint; those planning fields remain blank until team refinement rather than being backdated.

Acceptance criteria

Scenario 1 - Venue Staff set the hold expiry

Given a Coordinator requests a tentative hold for a free venue and period When the responsible Venue Staff set an expiry date and time for that hold Then the resulting Tentative hold records that staff-configured expiry and reserves its venue window; no fixed default duration is applied

Scenario 2 - No active hold without a configured expiry

Given no Venue Staff expiry has been set for a requested hold When the request is viewed or another booking is checked Then it is not represented as an active Tentative hold or an indefinite reservation

Scenario 3 - Coordinator chooses the warning time

Given a Tentative hold has a staff-configured expiry When the Coordinator sets a warning time for that hold Then the system records that warning for the hold and notifies the Coordinator before or at expiry according to the configured time

Scenario 4 - Expiry frees the venue

Given a configured hold reaches its expiry without becoming a booking request When the expiry processing runs Then the hold becomes Expired, the venue window is freed, and a Coordinator who still needs it must submit a new request

Scenario 5 - Venue Staff update an unexpired hold

Given a Tentative hold has not expired When Venue Staff update its expiry Then the new expiry applies and the Coordinator is notified of the change; the update does not create a second hold for the same reservation

E07 - Equipment & Technical Support

9 Release 1 story/stories

E07-S01 - Maintain the equipment catalogue (SCRUM-51)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 3	Assignee	Xiangying
Status	Done	Requirements	-

User story

As a Technical Support Staff member, I want to maintain equipment records including type, quantity, location and operational status so that availability checks are based on accurate data.

Acceptance criteria

Scenario 1 - Item added and reservable

Given I am adding an equipment item When I save its type, description, quantity, location and operational status Then it becomes available for reservation

Scenario 2 - Quantity drop flags reservations

Given an item is already reserved for upcoming events When I reduce its quantity below the amount reserved Then the affected reservations are flagged and the relevant Coordinators are notified

Scenario 3 - Item retired

Given an item has no future reservations When I retire it Then it no longer appears in availability checks and its past reservations are retained

E07-S02 - Request equipment for an event (SCRUM-52)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 3	Assignee	Xiangying
Status	Done	Requirements	T-25

User story

As an Event Coordinator, I want to record the equipment an event needs, with quantities, so that Technical Support Staff can check whether it can be provided.

Acceptance criteria

Scenario 1 - Equipment recorded against an event

Given I am planning an approved event When I add equipment items with quantities to an event Then the request is saved against the event and the Technical Support Staff are notified

Scenario 2 - Request exceeds total stock

Given I request more of an item than ConnectSphere owns in total When I save the request Then I am warned that the request cannot be met from existing stock

Scenario 3 - Events independent of each other

Given an event has several events When I record equipment for the event Then the other events are unaffected

E07-S03 - Check equipment availability (SCRUM-53)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 3	Assignee	Xiangying
Status	Done	Requirements	C-07, C-20

User story

As a Technical Support Staff member, I want to see how much of an item is free for a given date and time so that I can decide whether a request can be met.

Acceptance criteria

Scenario 1 - Reserved and faulty stock excluded

Given some items are reserved for other events in the period When I check availability Then the free quantity excludes those reservations and any items marked damaged or under maintenance

Scenario 2 - Location does not affect availability

Given an item is free for the requested date and time but is currently located at another venue When I check availability Then it is shown as available and no transport allowance is applied

Scenario 3 - Non-overlapping events share an item

Given two events require the same item at non-overlapping times on the same day When I check availability Then the item is free for both

E07-S04 - Reserve equipment for an event (SCRUM-54)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 3	Assignee	Aaron
Status	Done	Requirements	C-21, T-24, B-09

User story

As a Technical Support Staff member, I want to reserve equipment for an event so that limited equipment is not committed to two events at the same time.

Acceptance criteria

Scenario 1 - Full reservation recorded

Given sufficient equipment is free for the period When I reserve the requested quantity Then the reservation is recorded against the event and the Event Coordinator is notified

Scenario 2 - Partial reservation and shortfall

Given only part of the requested quantity is free When I record a partial reservation Then the Coordinator is notified of the shortfall and the outstanding quantity

Scenario 3 - Fully committed item shows nothing free

Given an item becomes fully committed When availability is next checked for that period Then no free quantity is shown

Scenario 4 - Reservation released

Given an event is cancelled or its equipment is no longer required When I release the reservation Then the quantity returns to the available pool

E07-S05 - Mark equipment as unavailable (SCRUM-55)

Priority	Medium	Points	1.0
Sprint	SCRUM Sprint 3	Assignee	Aaron
Status	Done	Requirements	B-04

User story

As a Technical Support Staff member, I want to mark equipment as damaged or under maintenance so that it is not treated as available for events.

Acceptance criteria

Scenario 1 - Item marked unavailable

Given an item has no reservations in the period When I mark it unavailable with a reason and a period Then it is excluded from availability checks for that period

Scenario 2 - Reserved item flags its events

Given an item is reserved for an upcoming event When I mark it unavailable Then the affected events are flagged and their Coordinators are notified

E07-S06 - Request technical support for an event (SCRUM-56)

Priority	Medium	Points	1.0
Sprint	SCRUM Sprint 3	Assignee	Amareet
Status	Done	Requirements	C-22, T-23

User story

As an Event Coordinator, I want to request on-site technical support for an event and describe what is needed so that suitable staff can be allocated.

Acceptance criteria

Scenario 1 - Support request recorded

Given an event requires technical support When I submit a request describing the support and the times it is needed Then the Technical Support Staff are notified and the request is recorded against the event

Scenario 2 - Request accepted before venue confirmed

Given the event does not yet have a confirmed venue When I submit a technical support request Then it is accepted and reviewed alongside venue identification

Scenario 3 - Event marked as needing none

Given an event needs no technical support When I mark it as such Then no request is created and confirmation is not blocked on staff assignment

E07-S07 - Assign and manage technical staff for an event (SCRUM-57)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 3	Assignee	Amareet
Status	Done	Requirements	C-39

User story

As a Technical Support Staff member, I want to assign and manage available colleagues to support an event so that the right people are on site at the right time.

Acceptance criteria

Scenario 1 - Available colleague assigned

Given an event has an open technical support request and a colleague is available for its times When I assign them Then they are notified and the assignment appears on their schedule

Scenario 2 - Overlapping assignment blocked

Given a colleague is already assigned to another event at an overlapping time When I try to assign them Then the assignment is blocked and the conflicting event is identified

Scenario 3 - Assignment removed

Given an assignment exists When I remove it Then the colleague is notified and the slot is freed

Scenario 4 - Replacement assigned under same check

Given I have removed an assignment When I assign a replacement Then the same conflict check is applied

E07-S08 - Link equipment requests and reservations to Sessions (SCRUM-181)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 5	Assignee	Aaron
Status	Done	Requirements	C-107, T-74, T-79

User story

As a Technical Support Staff member, I want equipment requests and reservations to identify the Session they support so that availability and fulfilment use the correct Session period.

Acceptance criteria

Scenario 1 - Request linked to its Session

Given an Event has multiple Sessions When an Event Coordinator records equipment needed for one Session Then the request is linked to that Session and remains part of the Event

Scenario 2 - Reservation linked to its Session

Given a request is approved for reservation When Technical Support Staff reserve equipment Then each reservation identifies the same Session and uses its date/time for availability checks

Scenario 3 - Cross-event Session rejected

Given a request belongs to one Event When a Session from a different Event is selected Then the request or reservation is rejected and no cross-event link is saved

Scenario 4 - Event-level assignment remains

Given Technical Support Staff are assigned to support an Event When Sessions are added or changed Then the staff assignment remains event-level unless a separate accepted requirement changes it

E07-S09 - Preserve reservation warnings when stock reductions overlap withdrawals (SCRUM-245)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 5	Assignee	Aaron
Status	Done	Requirements	C-07, C-20

User story

As a Technical Support Staff member, I want catalogue stock reductions to account for dated equipment withdrawals so that reservations which no longer fit are flagged and their Coordinators are notified.

Acceptance criteria

Scenario 1 - Reduced usable stock flags reservations

Given an item has total stock 10, four units withdrawn and five units reserved for the same future period When I reduce total stock to 8 Then the save succeeds, the reservation remains reserved but is marked for review, and its assigned active Coordinator receives one notification and an outbox record

Scenario 2 - Only simultaneous remaining demand counts

Given reservations and dated withdrawals have different or adjacent periods When I reduce total stock Then only simultaneous demand in each reservation's remaining period is compared against the new stock; a withdrawal starting midway through the reservation is included, non-overlapping withdrawal quantities are not summed, and exact fits are not flagged

Scenario 3 - Notification failure rolls back the edit

Given a stock reduction would flag a reservation because of a withdrawal When notification persistence fails Then the stock change, new review flag and notification all roll back

E08 - Readiness & Confirmation

4 Release 1 story/stories

E08-S03 - Confirm an event (SCRUM-60)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 3	Assignee	Aaron
Status	Done	Requirements	C-13, C-39, C-59, C-63, T-02, T-24, T-27, C-67, T-68, O-28, C-70, T-71, T-74, O-39, O-40

User story

As an Event Coordinator, I want to confirm an event once the event's arrangements are complete so that the Event Organiser and Attendees can rely on the details.

Amended in place for the Week 7 Customer Changes (C-70, T-71; this story is To Do, T-74). Completing the arrangements no longer sets Confirmed directly: it lets the Coordinator submit the event for its Operational Safety Check, which moves it to the new Safety Review status, and the Safety Officer's approval (E08-S06) is what sets Confirmed. The readiness checks below are unchanged in substance; what they now gate is the submission. Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md`.

Acceptance criteria

Scenario 1 - All arrangements complete, event submitted for safety review

Given every venue booking on the event is Confirmed or has been withdrawn, at least one is Confirmed, its full requested equipment is reserved and any requested technical support is assigned When I submit the event for its Operational Safety Check Then the status becomes Safety Review, the Safety Officer is notified, the Organiser is told the event is awaiting its safety check, and the event becomes Confirmed only when the Safety Officer approves it (E08-S06) (C-67, T-68, C-70, T-71; assumes O-28, O-39, O-40)

Scenario 2 - Missing venue blocks submission

Given the event has no Confirmed venue booking, or any of its venue bookings is still Pending or Conflicting When I try to submit for safety review Then submission is blocked and each outstanding booking is listed by venue (assumes O-28)

Scenario 3 - Partial equipment blocks submission

Given the event has only a partial equipment reservation When I try to submit for safety review Then submission is blocked and the outstanding quantity is shown

Scenario 4 - None required does not block

Given the event was submitted with 'none required' for equipment When I submit it for safety review Then that requirement counts as fulfilled and does not block submission

Scenario 5 - Outstanding support assignment blocks submission

Given the event requested technical support and no staff are assigned When I try to submit for safety review Then submission is blocked

Scenario 6 - Organiser sees confirmed arrangements

Given an event has been confirmed When the Event Organiser views it Then every confirmed venue with its purpose and period, the date, time and arrangements are shown

Scenario 7 - Confirmed is reached only through approval

Given an event is in Safety Review When anyone other than a Safety Officer attempts to set its status to Confirmed Then the action is refused and recorded in the activity log (C-70, T-71)

E08-S04 - Revert a confirmed event to planning (SCRUM-61)

Priority	Medium	Points	1.0
Sprint	SCRUM Sprint 5	Assignee	Lexin
Status	In Review	Requirements	C-48, T-03, T-28, C-70, T-71, C-120, T-81, C-132, T-82

User story

As an Event Coordinator, I want a confirmed event to return to Planning when an arrangement requires it so that the system reflects the event's readiness and starts safety review at the right time.

Acceptance criteria

Scenario 1 - Manual reversion records a reason

Given an event is Confirmed When I deliberately revert it to Planning and record a reason Then the status becomes Planning and the Event Organiser is notified with the reason

Scenario 2 - Registered Attendees notified on deliberate reversion

Given registered Attendees exist When I deliberately revert the event Then they are notified that arrangements are being revised

Scenario 3 - Other broken arrangements remain flagged

Given a non-venue arrangement breaks on a Confirmed event When the owning workflow flags it Then the affected arrangement is flagged and the Coordinator can use the deliberate reversion workflow; venue-block loss follows Scenario 5

Scenario 4 - Arrangements reconfirmed and safety review starts automatically

Given a reverted event has all required venue and technical arrangements confirmed again When the final required arrangement is confirmed Then the event enters Safety Review automatically, the Safety Officer is notified, and the previous safety decision remains in history but is not reused (C-132, T-82)

Scenario 5 - Venue loss automatically returns event to Planning

Given a block makes a Confirmed event's active venue booking unavailable When the block is saved Then the event returns to Planning/change review automatically, the assigned Coordinator is notified immediately, and the event is not cancelled (C-120, T-81)

E08-S05 - Complete an event (SCRUM-62)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4	Assignee	Xiangying
Status	Done	Requirements	T-03, T-26, T-48

User story

As an Event Coordinator, I want an event to become Completed once it has taken place so that attendance can be recorded and the event closed.

Acceptance criteria

Scenario 1 - Auto-completed after the end time

Given an event is Confirmed and its end time has passed When the system next evaluates it Then the status becomes Completed

Scenario 2 - Marked complete manually

Given an event is Confirmed and has already started When I mark it complete Then the status becomes Completed

Scenario 3 - Premature completion blocked

Given an event is Confirmed and has not yet started When I try to mark it complete Then the action is blocked

Scenario 4 - Cancelled event never auto-completes

Given an event is Cancelled When its original end time passes Then it is not auto-completed and remains Cancelled

E08-S06 - Conduct the Operational Safety Check as the Safety Officer (SCRUM-158)

Priority	Medium	Points	8.0
Sprint	SCRUM Sprint 5	Assignee	Aaron
Status	Done	Requirements	C-70, T-71, T-72, T-73, T-74, O-39, O-40, O-41, O-42, O-43

User story

As a Safety Officer, I want to review the operational safety of each event whose venue and technical arrangements are confirmed, and approve it, reject its safety arrangement or request changes, so that no event proceeds to preparation until it is safe to run.

New story from the Week 7 Customer Changes (C-70) and the seventh role (T-72). The Safety Review status it works on sits between Planning and Confirmed as an interim placement (T-71); O-39 asks the customer to confirm. The customer guarantees a response, so there is no timeout path. Estimate at Sprint 3 planning (T-73). Scenarios tagged "(assumes O-xx)" are written to the default recorded in `docs/bdr/C-open-questions.md`.

Acceptance criteria

Scenario 1 - Events awaiting review listed with what the check needs

Given events are in Safety Review When I open my queue Then each shows the event name, date and time, every confirmed venue with its capacity, layout and known restrictions, expected attendance, accessibility requirements, equipment and its placement, and the time it entered Safety Review, oldest first

Scenario 2 - Structured review of the listed factors

Given I open an event from the queue When I conduct the check Then I record, for each of expected attendance against capacity, venue capacity and layout, emergency access, accessibility requirements, equipment placement, crowd movement and known venue restrictions, whether it is satisfactory, with a comment, before choosing an overall decision (assumes O-42)

Scenario 3 - Approval confirms the event

Given every factor is satisfactory When I approve Then the status becomes Confirmed, the Organiser and the Coordinator are notified with the confirmed details (E08-S03 Scenario 6 and E11-S01's "Event confirmed" row apply), and the activity log records my decision, my identity, the time and the completed checklist

Scenario 4 - Requesting changes returns the event to planning

Given one or more factors are unsatisfactory When I request changes and record which factors and why Then the status becomes Planning, the Coordinator and the Organiser are notified with the items to address, the affected venue or technical arrangements are flagged for re-review, the decision is logged, and the event cannot become Confirmed until it is resubmitted (E08-S03) and approved (assumes O-41)

Scenario 5 - Rejecting the safety arrangement does not cancel the event

Given the safety arrangement as a whole is unacceptable When I reject it and record the reason Then the status becomes Planning with a visible "safety arrangement rejected" flag and the reason, the Coordinator and the Organiser are notified, the event is not cancelled, and the Coordinator may rework and resubmit or cancel it through E10-S04 (assumes O-41)

Scenario 6 - Reason required for reject or request changes

Given I choose reject or request changes When I have not recorded a reason Then the decision is refused until I do

Scenario 7 - Only a Safety Officer decides

Given I am a Coordinator, an Event Coordinator Lead or any other role When I attempt to approve, reject or request changes on an event in Safety Review Then the action is refused and recorded in the activity log

Scenario 8 - Events confirmed before this story are not re-reviewed

Given an event was Confirmed before the Operational Safety Check existed When the check is introduced Then that event keeps its status, has no safety record and is not placed in Safety Review (assumes O-43)

Scenario 9 - Status display and deactivation treat Safety Review as active

Given an event is in Safety Review When its Organiser tracks it (E03-S05) Then "Safety Review" and the date it was reached are shown in plain language; and Given its Coordinator attempts to deactivate their account (E01-S11) Then Safety Review counts as an active-lifecycle status and deactivation is blocked (T-52)

Scenario 10 - Every decision is auditable

Given I approve, request changes or reject When the decision completes Then the activity log holds an entry with my identity, the action (safety check approved, changes requested or rejected), the event, the time and the checklist, immutable as E14-S02 requires

E09 - Attendee Registration

7 Release 1 story/stories

E09-S01 - Register for an event (SCRUM-63)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 4	Assignee	Amareet
Status	Done	Requirements	C-35, C-67, C-97, C-107, T-68, T-78, T-79, T-85

User story

As an Attendee, I want to register once for a confirmed Event and select the Sessions I will attend so that my place is reserved across the Event I chose.

Acceptance criteria

Scenario 1 - Place reserved in an open Event

Given an Event is Confirmed, registration is open, and selected Sessions have capacity When I submit the required registration information and select one or more Sessions Then one active Event-level registration records those Sessions and I receive a confirmation with the Event and selected Session details

Scenario 2 - One active registration per account and Event

Given I already have an active registration for an Event When I attempt to submit another registration for that Event Then ConnectSphere tells me I am already registered and does not create a second active registration; selecting multiple Sessions remains part of the existing registration

Scenario 3 - Missing fields identified

Given a required registration field is empty When I submit Then registration is blocked and the missing fields are identified

Scenario 4 - Unconfirmed Event refused

Given an Event is not Confirmed When I attempt to register Then registration is refused

Scenario 5 - Event and Session venue information shown

Given a Confirmed Event has one or more confirmed venue bookings When I view registration Then the Event summary shows its primary venue and the selected Session details show their own confirmed venues; venues are not separate registrations (C-67, T-78, T-79)

E09-S02 - Enforce registration capacity (SCRUM-64)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4	Assignee	Amareet
Status	Done	Requirements	C-05, C-58, C-78, C-98, T-30, T-31, T-50, T-85, B-11, T-98

User story

As an Event Organiser, I want the system to enforce each selected Session's approved layout capacity and the combined Event capacity so that registrations do not exceed either limit.

Acceptance criteria

Scenario 1 - Both capacity limits enforced

Given a registration selects one or more Sessions When the request is within each selected Session's approved layout capacity and within the combined Event capacity Then it may be confirmed; if either limit would be exceeded it is not confirmed as an approved seat (C-78, T-85)

Scenario 2 - Over-capacity submission remains Pending

Given an Attendee submits a registration that would exceed a selected Session capacity or the combined Event capacity When it is received Then it is saved as Pending for the Event Organiser to approve or reject and does not count as an approved seat (C-98, T-85)

Scenario 3 - Pending request approval rechecks both limits

Given a registration is Pending When the Event Organiser approves it Then approval succeeds only if both the selected Session capacities and combined Event capacity remain available; otherwise it stays unapproved until capacity/arrangements change or it is rejected

Scenario 4 - Concurrent submissions do not overbook

Given one approved seat remains in a Session or in the combined Event capacity When two registrations are submitted at the same time Then at most one is confirmed against that remaining capacity and any other submission that exceeds capacity is Pending

Scenario 5 - Waiting list remains event-level

Given the combined Event capacity is full When an Attendee opens registration Then the existing Event-level waiting-list option is offered where enabled; a full selected Session follows the Pending decision path and has no separate Session-level waiting list (T-98)

Scenario 6 - Manual addition allowed within both limits

Given normal registration is full but both the selected Session and combined Event capacity have room When the Event Organiser manually adds an Attendee Then the registration is created as a distinguishable manual addition (C-58, T-50)

Scenario 7 - Manual addition blocked at either limit

Given the selected Session or combined Event capacity is already full When the Event Organiser manually adds an Attendee Then the addition is blocked and neither capacity is exceeded

E09-S03 - Control the registration period (SCRUM-65)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4	Assignee	Amareet
Status	Done	Requirements	C-24, C-44, T-42, T-79, T-85

User story

As an Event Organiser, I want to set one registration and withdrawal window for the Event so that attendees can select Sessions within a consistent Event-level period.

Acceptance criteria

Scenario 1 - Before registration opens

Given the Event-level registration opening date has not been reached When an Attendee views the Event Then registration is shown as not yet open and the opening date is stated

Scenario 2 - After registration closes

Given the Event-level registration closing date has passed When an Attendee tries to register for any Session Then registration is refused

Scenario 3 - Closing date after Event start warned

Given I set the Event-level closing date after the Event has started When I save Then I am warned and asked to confirm

Scenario 4 - Waiting list enabled for Event

Given I enable the waiting list for an Event When its combined Event capacity is full Then the Event-level waiting list is offered where enabled

E09-S04 - Join the waiting list (SCRUM-66)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 4	Assignee	Aaron
Status	Done	Requirements	C-23, T-33, T-46, B-10, T-98

User story

As an Attendee, I want to join the waiting list when an event is full so that I can still attend if a place is released.

Acceptance criteria

Scenario 1 - Joined a full event's list

Given the combined Event capacity is full and its Event-level waiting list is enabled When I join the waiting list Then I am added to the Event-level list and told I will be notified when a place is released; no Session-level waiting list is created (T-98)

Scenario 2 - Released place notified to all

Given a place is released in an event with a waiting list When the place becomes available Then all waitlisted Attendees are notified and the place is claimed on a first-come, first-served basis

Scenario 3 - Claimed place leaves the list

Given I claim a released place When my registration completes Then I am removed from the waiting list

Scenario 4 - Disabled list offers nothing

Given the waiting list is disabled for an event When the event is full Then no waiting list is offered

E09-S05 - Withdraw my registration (SCRUM-67)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4	Assignee	Aaron
Status	Done	Requirements	C-24, T-48, B-10, T-79, T-85

User story

As an Attendee, I want to withdraw my Event registration so that my Event place and places in all selected Sessions are released together.

Acceptance criteria

Scenario 1 - Registration withdrawn from Event and Sessions

Given I have an active Event registration selecting one or more Sessions and the withdrawal deadline has not passed When I withdraw Then the Event registration is cancelled and its approved places are released from every selected Session and from the combined Event capacity

Scenario 2 - Withdrawal after deadline refused

Given the Event-level withdrawal deadline has passed When I try to withdraw Then I am told withdrawal has closed and given a contact for assistance

E09-S06 - Record attendance (SCRUM-68)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 4	Assignee	Xiangying
Status	Done	Requirements	C-45

User story

As an Event Coordinator, I want to record which registered Attendees actually attended the event so that registration and attendance can be distinguished.

Acceptance criteria

Scenario 1 - Attendance marked after completion

Given an event has status Completed When I mark an Attendee as attended for an event Then their record shows attended and the registration figure is unchanged

Scenario 2 - Registered but not attended

Given a registered Attendee did not attend When the event is Completed Then they are shown as registered but not attended

Scenario 3 - Recording before completion blocked

Given an event is not yet Completed When I try to record attendance Then the action is blocked

E09-S07 - View registrations for my event (SCRUM-69)

Priority	Medium	Points	1.0
Sprint	SCRUM Sprint 4	Assignee	Amareet
Status	Done	Requirements	C-26, T-32, O-05

User story

As an Event Organiser, I want to view the list of Attendees registered for my event so that I can plan for the numbers attending the event.

Acceptance criteria

Scenario 1 - Registrations grouped by event

Given Attendees have registered for my event When I open its registration list Then I see each Attendee's name, email address and contact number

Scenario 2 - Counts and remaining capacity

Given I open the registration list When it is displayed Then the registered count and remaining capacity are shown for the event

Scenario 3 - Unmanaged event refused

Given an event does not belong to my client organisation When I attempt to open its registration list Then access is refused

Scenario 4 - Waitlist shown separately

Given a waiting list exists for an event When I view the list Then waitlisted Attendees are shown separately from registered Attendees

E10 - Changes, Rescheduling & Cancellation

4 Release 1 story/stories

E10-S01 - Request a change after submission (SCRUM-70)

Priority	Medium	Points	8.0
Sprint	SCRUM Sprint 5	Assignee	Jining
Status	In Progress	Requirements	C-14, C-52, C-54, C-77, T-16, T-88

User story

As an Event Organiser, I want to request a change to my event after it has been submitted or confirmed so that the arrangements reflect what I now need.

Acceptance criteria

Scenario 1 - Change request recorded

Given my Event has been approved or confirmed When I submit a change request describing what should change Then the assigned Coordinator is notified and the request is recorded against the Event

Scenario 2 - Confirmed details shown alongside

Given a change request is Pending When I view my Event Then the currently confirmed details are shown alongside the pending request

Scenario 3 - Refused edit offers the form

Given I attempt to edit a restricted field directly after approval When the edit is refused Then I am offered the change-request form pre-filled with that field

Scenario 4 - Approved change applied

Given the Coordinator approves my change request When it is applied Then the Event is updated and I am notified

Scenario 5 - Declined request communicated

Given the Coordinator declines my change request When the decision is recorded Then I am notified and the confirmed Event details remain unchanged

Scenario 6 - Terminal Event closes pending requests as Obsolete

Given the Event becomes Completed or Cancelled while one or more change requests are Pending When the Event reaches that terminal status Then each Pending request becomes Obsolete, the transition is recorded in history, and Obsolete is distinct from a Coordinator rejection (C-77, T-88)

E10-S02 - Distinguish minor edits from arrangement-affecting changes (SCRUM-71)

Priority	Medium	Points	8.0
Sprint	SCRUM Sprint 5	Assignee	Lexin
Status	In Review	Requirements	C-05, T-16, B-05, B-11, C-67, T-68, O-27, C-107, T-79, T-104

User story

As an Event Coordinator, I want the system to identify which Session arrangements a change affects so that I re-check the right bookings and reservations.

Acceptance criteria

Scenario 1 - Session attendance beyond capacity flagged

Given a Session has a confirmed venue booking When its expected attendance changes Then each booking whose own headcount is set uses that headcount, otherwise it uses the Session attendance; only a booking whose governing headcount exceeds capacity is flagged and Venue Staff are notified

Scenario 2 - Description-only edit flags nothing

Given an Event has confirmed venue and equipment arrangements When only its Event description is edited Then no arrangements are flagged

Scenario 3 - Affected Session arrangements shown first

Given a change affects confirmed arrangements When I save it Then I am shown the affected Session bookings, equipment reservations and staffed Technical Support requests before the change takes effect (T-104)

Scenario 4 - Over-subscription warns only

Given a change would make a Session or combined Event registration capacity lower than approved registrations When the change is saved Then I am warned and shown the over-subscription, and no Attendee is automatically removed or waitlisted

Scenario 5 - Session date/time change flags its arrangements

Given a Session date or time changes When the change takes effect Then that Session's venue booking and equipment reservations, and any staffed Technical Support request overlapping its previous time, are flagged for reconfirmation; an Event-wide date/time change flags all of its Session arrangements and every staffed Technical Support request; a flagged Technical Support request counts as outstanding for readiness until Technical Support Staff reconfirm it at the new time (T-104)

Scenario 6 - Affected staff notified

Given a change flags a venue, equipment or Technical Support staffing arrangement When the affected arrangements are identified Then the assigned Venue Staff and Technical Support Staff are notified

E10-S04 - Cancel an event (SCRUM-73)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 4	Assignee	Xiangying
Status	Done	Requirements	C-14, C-54, C-77, T-07, T-48, T-79, T-88

User story

As an Event Coordinator, I want to cancel an Event and release its Session arrangements so that venues and equipment do not stay committed to something that will not happen.

Acceptance criteria

Scenario 1 - Event cancelled and Session arrangements released

Given an Event Organiser requests cancellation When I cancel the Event and record a reason Then its status becomes Cancelled, all Session venue bookings and equipment reservations are released, calendars/availability are updated, and affected staff are notified

Scenario 2 - Attendees and waiting list notified

Given Attendees are registered or waitlisted for a cancelled Event When cancellation completes Then all are notified

Scenario 3 - Cancelled Event read-only

Given an Event has been cancelled When any user views it Then it is read-only and shows the cancellation reason and date

Scenario 4 - Organiser cancellation becomes a request

Given an Event Organiser attempts to cancel directly When they submit Then the action is recorded as a cancellation request for the Coordinator to action

Scenario 5 - Pending change requests become Obsolete

Given the Event has Pending change requests When cancellation completes Then each request becomes Obsolete and the transition is recorded in history (C-77, T-88)

E10-S05 - Handle a venue lost from a confirmed event (SCRUM-74)

Priority	Medium	Points	5.0
Sprint	SCRUM Sprint 4	Assignee	Jining
Status	Done	Requirements	C-66, C-61, C-120, C-121, T-28, T-67, T-73, T-74, T-81, O-24, O-25

User story

As an Event Coordinator, I want to be alerted when a venue becomes unavailable for one of my events and to find and request a replacement from the event itself, so that I can arrange an alternative before Attendees are affected while the original event information is preserved.

Returned to Release 1 by the Week 7 Customer Changes (C-66, T-67). The original estimate was three points. A five-point re-estimate was proposed on 26 October 2026 at the story owner's request for teammate review. Jira remains at three points until the matching backlog PR merges, then is reconciled to five points. The four current scenarios include lost-booking context and same-event replacement search, linked replacement requests, explicit cancellation only after confirmation, and effective-change publication/notification timing with integration and rollback testing. T-73 estimates in-flight stories for their remaining work only. Because the criteria changed on 23 October before implementation began, team/PO confirmation is required on whether five points records the revised pre-implementation size and how it is counted for sprint reporting. It is not an agreed estimate of work remaining now, and original commitments and historical estimates must be preserved. Elapsed waiting time is not story-point effort. E05-S06 still owns the unavailability trigger and Confirmed-to-Planning transition; that implementation is not counted again here.

Updated on 23 October 2026, before any work on the story started, to the Week 9 decisions that closed O-24 and O-25; an incomplete story's criteria are updated in place (T-74). T-81 returns a Confirmed event that loses its venue to Planning without cancelling it (C-120), replacing the earlier "status unchanged" default in Scenario 1. C-121 confirms the Scenario 4 notification rule.

Acceptance criteria

Scenario 1 - Lost venue flags the event

Given my event has a Pending or Confirmed venue booking When Venue Staff mark that venue unavailable over the booking's period (E05-S06) Then I am notified, the booking shows as Conflicting on the event, and the event is flagged as needing alternative arrangements; a Confirmed event returns to Planning without being cancelled, and every other arrangement stays as it was (C-120, T-81)

Scenario 2 - Flagged event offers a replacement search

Given my event is flagged When I open it Then the reason category, the period and the affected booking are shown, the original venue, dates and requirements are preserved, and I can start a venue search (E06-S01) for the same event from that screen

Scenario 3 - Replacement requested without losing the original

Given I have found a replacement venue When I submit a booking request for it (E06-S03) Then the request is created for the same event alongside the Conflicting booking, and I may cancel the Conflicting booking explicitly once the replacement is Confirmed; nothing is cancelled for me

Scenario 4 - Organiser and Attendees told on the actual change

Given my event lost its venue When the replacement booking is confirmed Then the Organiser and registered Attendees are notified of the new venue through the existing venue-change routing (E11-S01), and not earlier (C-121, T-81)

E11 - Notifications & Reminders

1 Release 1 story/stories

E11-S01 - Notify users about events they are involved in (SCRUM-75)

Priority	Medium	Points	13.0
Sprint	SCRUM Sprint 5, SCRUM Sprint 2, SCRUM Sprint 3	Assignee	Jining
Status	In Progress	Requirements	C-04, C-29, C-53, C-68, C-69, C-79, C-99, C-124, C-125, C-128, C-129, T-35, T-36, T-44, T-48, T-64, T-69, T-70, C-70, T-71

User story

As a user involved in an event, I want to be notified when its status or arrangements change so that I do not have to keep checking the system and nobody continues working from outdated information.

Estimate proposal (31 October 2026, for team/PO review): change the full-story size from the original five points to thirteen. Jira remains at five until the proposal is approved and merged. The routing matrix spans status/booking, equipment/support, effective arrangement changes, cancellation and waiting-list notifications; implementation includes recipient filtering, actor exclusion, deduplication, public/private content boundaries, transactional inbox/outbox, email failure handling, inbox/read state, and cross-workflow integration and human delivery evidence. Business implementations owned by booking, equipment, registration and change-management stories are excluded; only their E11 hooks and notification verification are counted here. Waiting time, PR count and work already credited elsewhere are not estimation inputs.

Thirteen is a proposed whole-story sizing correction, not thirteen points of remaining work or extra velocity. T-73 sizes in-flight work by the remaining work, so team/PO confirmation of the recording/reporting basis is required; original sprint commitments and the five-point historical baseline stay intact. T-37 currently maps S=1, M=3, L=5 and XL=8: thirteen requires explicit team/PO agreement to a larger size or an alternative estimate. This proposal does not silently amend T-37 or claim a new size has already been agreed. Acceptance criteria, implementation status and final acceptance requirements are unchanged.

Acceptance criteria

Scenario 1 - Status change notified

Given I am a recipient under the approved routing matrix When an event status changes or a booking decision is made Then I receive a notification stating what changed, when, and which event it concerns, unless I performed the action myself

Scenario 2 - All affected parties notified

Given the event's date, time or venue changes When the change takes effect Then the Event Organiser, assigned Event Coordinator, affected assigned Venue Staff, affected assigned Technical Support Staff, registered Attendees and waitlisted Attendees are notified according to the routing matrix, excluding the acting user

Scenario 3 - Unaffected users not notified

Given a change does not affect a particular user's responsibilities When the change occurs Then that user is not notified

Scenario 4 - Delivered in-app and by email

Given a notification is generated for me When it is delivered Then it appears in the system and is also sent to my registered email address

Scenario 5 - Unread notifications distinguished

Given I have several unread notifications When I open my notification list Then they are shown newest first with unread ones distinguished

Scenario 6 - Marked as read

Given I open an unread notification When I have read it Then it is marked as read

E14 - Audit & History

2 Release 1 story/stories

E14-S02 - Record significant actions in an activity log (SCRUM-86)

Priority	Medium	Points	3.0
Sprint	SCRUM Sprint 1, SCRUM Sprint 2, SCRUM Sprint 3	Assignee	Lexin
Status	Done	Requirements	T-04, T-75, T-76

User story

As a ConnectSphere staff member, I want significant actions to be recorded so that we can determine who did what and when.

Acceptance criteria

Scenario 1 - Status change recorded

Given an event status changes When the change completes Then an entry is recorded with the actor, the action, the affected event and the time, and an Event Coordinator permitted to view the event can read it in the event Activity log; access-denial entries are not shown in that log

Scenario 2 - Access denial recorded

Given a user is denied access to an event or screen When the refusal occurs Then an entry is recorded with the user, the target and the time

Scenario 3 - Transferred to E06-S04 Scenario 5 (T-76)

Booking approval, rejection and release logging is accepted under E06-S04. This historical scenario number is retained for traceability and is not an E14-S02 completion criterion.

Scenario 4 - Deactivation recorded

Given an account is deactivated When the action completes Then an entry is recorded

Scenario 5 - Log entries immutable

Given an activity log entry exists When any user attempts to edit or delete it Then the attempt is refused

E14-S03 - Read edited Activity log dates and times in Singapore time (SCRUM-197)

Priority	Medium	Points	[CONFIRM]
Sprint	SCRUM Sprint 3	Assignee	Lexin
Status	Done	Requirements	T-93

User story

As an Event Organiser or the assigned Event Coordinator, I want edited date/time values in my existing event Activity log to be readable in Singapore time so that I can understand the recorded edit without interpreting raw UTC strings.

Acceptance criteria

Scenario 1 - Both existing readers see Singapore time

Given an authorised Organiser or assigned Coordinator opens the existing event Activity log When an entry displays an edited date/time field value Then each date/time value already displayed by that view uses the existing shared Singapore formatter, including both old and new values where already shown, independently of the browser timezone; 2026-10-15T09:30:00Z represents 15 October 2026 at 17:30 Singapore time, not 16 October. Existing field keys are startAt, endAt and registrationDates; registrationDates stores "opensAt to closesAt", so both endpoints are formatted for display without changing that stored string.

Scenario 2 - Singapore calendar rollover

Given an edited date/time value is 2026-10-15T18:30:00Z When either view displays it Then it represents 16 October 2026 at 02:30 Singapore time; the calendar date as well as the hour is converted correctly.

Scenario 3 - Missing and invalid values keep the existing contract

Given a date/time value is missing or invalid When formatting is needed Then formatDate retains its existing "Not recorded" result; each view retains its existing omission/label-only behavior for absent change values, without throwing, inventing a date or introducing a new fallback.

Scenario 4 - Other values and existing display paths unchanged

Given an entry contains ordinary text, a status change or a venue hold expiry When either view renders it Then ordinary text remains text, existing status labels/badges remain unchanged, and existing hold-expiry formatting and behavior are preserved; the correction is field-aware, not conversion of every date-looking string.

Scenario 5 - Audit evidence and access unchanged

Given the existing event access rules apply When either permitted reader views or reloads the formatted log Then stored UTC old_value/new_value and occurred_at, actor and action remain unchanged and immutable; unauthorised readers remain refused and access-denial entries remain hidden from event logs, with no new audit viewer or permissions.

Traceability matrix

Requirement -> epic -> story -> acceptance criteria -> test case IDs. Test IDs are an inventory from the read-only test catalogue, not test-execution evidence.

R1-21	E14	E14-S02 - Record significant actions in an activity log	1: Status change recorded; 2: Access denial recorded; 3: Transferred to E06-S04 Scenario 5 (T-76); 4: Deactivation recorded; 5: Log entries immutable	TC_E14S02_01, TC_E14S02_02, TC_E14S02_03, TC_E14S02_04, TC_E14S02_05, TC_E14S02_06, TC_E14S02_07, TC_E14S02_08
R1-21	E14	E14-S03 - Read edited Activity log dates and times in Singapore time	1: Both existing readers see Singapore time; 2: Singapore calendar rollover; 3: Missing and invalid values keep the existing contract; 4: Other values and existing display paths unchanged; 5: Audit evidence and access unchanged	TC_E14S03_01, TC_E14S03_02, TC_E14S03_03, TC_E14S03_04, TC_E14S03_05, TC_E14S03_06

Traceability gaps requiring owner action

- `[CONFIRM]` stories without a matching TC ID: E06-S07.

- `[CONFIRM]` E06-S05 Scenario 4 (hold released) and E06-S06 Scenario 1 (first accepted claim) do not have a scenario-specific mapped TC in the current catalogue. The related TC IDs remain listed above, but those scenario links need test-owner review.

- `[CONFIRM]` TC_E09S02_07 cites E09-S02 Scenario 6 although its capacity-addition behaviour is now Scenario 7; TC_E10S01_05 cites a checklist rather than Scenario 5; TC_E03S01_07 needs explicit scenario references for reliable machine parsing.

- `[CONFIRM]` E03-S08 through E03-S10 test cases are scaffolds and retain earlier Lead-workflow wording. The current C-100/C-104/C-127-C-130 criteria require the test owner to update and execute them with the implementation change.

- The new E06-S07 customer-follow-up story intentionally has no test case yet. Create its cases in the test-owner's change before it can meet the Definition of Done.
